DANIEL SANMI OMOWOLE

Full-Stack Software Engineer

Lagos, Nigeria | +234 813 858 0959 | sanmidaniels07@gmail.com | Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience designing and delivering scalable web applications across fintech, healthcare, and enterprise platforms. Specializes in building performant, secure React/Next.js frontends and robust Node.js/Express backends, with hands-on expertise in RESTful API design, JWT authentication, role-based access control (RBAC), and PostgreSQL/Prisma data modeling. Known for translating complex business workflows — credit and KYC pipelines, membership and payment systems — into reliable, production-ready features, and for optimizing application performance through code-splitting, caching, and efficient state management.

TECHNICAL SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Mantine UI, Material UI, Redux, Zustand, Hookstate, React Query (TanStack Query), React Native, Vite.js, SEO Optimization

Backend: Node.js, Express.js, TypeScript, REST API Design, JWT Authentication, Role-Based Access Control (RBAC), Middleware Development, Zod Validation, Swagger/OpenAPI, CI/CD

Database & ORM: PostgreSQL, Prisma ORM, Supabase, Firebase

Practices: Unit & End-to-End Testing, Agile Workflows, Git/GitHub, Code Review, Performance Optimization, Cross-Functional Collaboration

CORE COMPETENCIES

Problem Solving & Debugging • Team Collaboration • Clear Communication • Cross-Functional Collaboration • Ownership & Accountability • Adaptability • Attention to Detail • Time Management • Constructive Code Review • Mentorship & Knowledge Sharing

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Contract) 2026 – Present

DayMate — Lagos, Nigeria

- Building a birthday-based social networking app end-to-end, owning both the Next.js 15 / Tailwind v4 frontend and the Express 5 / Prisma / Supabase backend.
- Designed and shipped a Stories feature end-to-end — schema, service layer, and a scheduled cron sweep for expiry — alongside reply-to-story messaging.
- Built social following/followers with privacy gating, community sync with anniversary-based matching, and Cloudinary-backed cover photo uploads with cache-busting via path-segment versioning.
- Elevated the UI across home, communities, chat, stories, profiles, discover, notifications, and onboarding, using React Query, Zustand, and Framer Motion for state and motion.
- Led a backend refactor toward a feature-based modular architecture to improve maintainability as the codebase grew.

Frontend Developer March 2024 – Present

EVEA — Lagos, Nigeria

- Design and build responsive, production-grade interfaces for a fintech credit, treasury, and financial-control platform used by growing businesses to spend, manage, and access capital, using React, TypeScript, and Tailwind CSS.

- Integrate RESTful APIs with TanStack Query to power credit scoring, identity verification, and payment gateway workflows, handling complex data fetching, caching, and background synchronization.
- Own end-to-end multi-step KYC flows — document uploads, real-time validation, and conditional form logic — reducing friction and errors in credit application journeys.
- Implement frontend security best practices, including input validation, secure authentication flows, and XSS prevention, to protect sensitive financial and identity data.
- Manage global application state with Hookstate and improve page-load performance through code splitting and lazy loading.
- Write and maintain unit and end-to-end tests to safeguard application reliability ahead of releases.

Frontend Engineer (Contract) April 2025 – July 2026

CIPMN — Chartered Institute of Project Managers of Nigeria — Lagos, Nigeria

- Architected and developed an enterprise platform for the Chartered Institute of Project Managers of Nigeria to manage Accredited Training Provider (ATP) records, membership data, payments, and project workflows.
- Built a multi-tab payment management system spanning License Renewal, Membership Renewal, Annual Conference, and MCDP payment types, with accurate enum-based routing and status filtering (approved/pending/declined).
- Designed a role-based permission layer — a custom usePermissions hook and hasPermission() access-control utility — to govern ATP profile management and protect sensitive actions across the platform.
- Built PDF, Excel, and CSV export utilities for invoices and ATP snapshots (jsPDF, jsPDF-AutoTable, xlsx, file-saver), including dual-logo branding and currency-formatting fixes for consistent, print-ready documents.
- Developed a Corporate Membership (CM) project management module with nested routing, reusable project-card components, and a staff/date-range filter modal to streamline internal case tracking.
- Built membership filtering and expiry logic with interval-based date ranges and country-based location filters, improving staff visibility into membership status across the organization.
- Integrated React Query platform-wide for paginated data fetching, optimistic updates, and background refetching, improving perceived performance across high-traffic modules.
- Contributed to the Node.js/Express/Prisma backend, resolving deployment configuration issues, schema/migration bugs, and route-ordering defects to keep releases stable.

Full-Stack Developer June 2023 – November 2023

Quickmed Emergency Services — Abuja, Nigeria

- Built responsive interfaces for a hospital management system serving both healthcare providers and patients, using React and Tailwind CSS.
- Integrated Firebase for real-time data storage, authentication, and live status updates, ensuring secure and seamless data flow across all user roles.
- Collaborated cross-functionally with backend teams to integrate RESTful APIs and conducted end-to-end testing to ensure full responsiveness across devices.

Full-Stack Developer August 2022 – August 2023

Bulb Africa — Lagos, Nigeria

- Developed and maintained full-stack web applications across multiple client projects, using Node.js, Prisma ORM, and PostgreSQL on the backend and React with TypeScript on the frontend.
- Built and consumed RESTful APIs, managing data persistence, schema design, and migrations with Prisma ORM and PostgreSQL.
- Built reusable component libraries in React to accelerate feature development across projects and integrated third-party services in partnership with UX/UI designers.
- Participated in code reviews and automated testing to uphold code quality standards across the team.

Software Engineer Intern February 2021 – June 2022

Techstudio Academy — Lagos, Nigeria

- Completed an intensive full-stack web development program, building production-ready applications with HTML, CSS, JavaScript, and React.
- Developed custom websites with reusable components, integrated third-party APIs, gaining hands-on experience with Git, Agile workflows, and professional development practices.

EDUCATION

Bachelor of Technology, Food Engineering September 2017

Ladoke Akintola University of Technology — Ogbomoso, Oyo State | GPA: 3.68/5.0

Diploma in Computer Science January 2012

Ladoke Akintola University of Technology

CERTIFICATIONS

Advanced Software Engineering March 2022

Bulb Africa — Yaba, Lagos

Full-Stack Web Development December 2020

Techstudio Academy — Lagos
